

Answer #1. The size of VIMO™ is roughly that of a VHS tape.
7" (W) x 4" (L) x ½" (T), powered by the vehicle battery.
The LCD touchscreen will be larger than a \$20 bill.

Answer #2. Every BS has to aggregate each individual menu from its member store or organization.

Answer #3. DriveOnPay™ and VIMO™ are basically designed in metropolitan setting. MG stands for MetrGoGate™ mode of operations that are focused on vehicle traffic either going toward or passing by a tollgate in both directions of traffic.

MP is short for MetroPlaza™ mode of operations that are to streamline all metropolitan traffic flow by optimizing parking solutions and cushioning traffic rushes to commercial centers that attract motorists all the time.

Answer #4. Normally, eCommerce is web-based, and m-Commerce is specifically based on mobile phones by use of either mobile websites, SMS (Text messaging), or e-mail. JITECGO is a whole lot different from m-Commerce in that it is not web-based. But it is a VPN dedicated between a BS and VIMO™ units. No room for hackers, phishing gangs and other cybercrime gangs. And no room for zombies and/or botnets.

JITECGO™ is designed to link the virtual and real worlds in no time, harnessing the vehicle traffic so as to generate an antidote to the traffic's by-product: traffic congestion and gridlocks. GPS navigators will eventually be integrated into the dashtop-mounted VIMO™ and other vehicle gadgetry will follow suit.

The reason: VIMO™ can enable you to pay at the wheel at 0 mph to 80mph in the most user-centric ways, setting you free from vehicle-related man-made afflictions.

Answer #5: Sorry we can't answer now, but we will keep you guessing until we are ready to offer some prize for the winners of this quiz #5, who is going to be the first manufacturer of VIMO.

Topping the list, however, will be Dell, Samsung, Sony Ericsson, Motorola, Toshiba and Garmin.

Answer #6: Sorry we can't answer now, but we will keep you guessing until we are ready to offer some prize for the winners of this quiz #6, who is going to be the first automobile maker to come up with VIMO™.

Just to name a few potential candidates, they are Audi, Volvo, Lexus, GM, Toyota, Hyundai and Volkswagen.
